PROFILE

First-year BBA student with hands-on experience in Python, SQL, Excel, GitHub and Power BI. Passionate about data analytics, data visualization, and solving business problems through data-driven insights.

EDUCATION

VNSGU

Bachelor of Business Administration (BBA)

July, 2026 - Present

SKILLS

- Analytics & Core Programming: Python (Pandas, NumPy, Matplotlib, Seaborn)
- Generative AI & Productivity: ChatGPT (Prompt Engineering for Python Scripting & Code Generation)
- Data Querying & Databases: SQL (MySQL Environment, Structured Querying)
- Business Intelligence & Reports: Power BI (Interactive Dashboards), Microsoft Excel (Advanced Pivot Tables, Data Summarization)
- Web Technologies & Tools: HTML, CSS, JavaScript (Basic scripting), Git, GitHub
- Languages : English, Gujarati, Hindi

PROJECTS

[Product Analysis](#) (Python • Power BI)

- Extracted and structured a large-scale e-commerce dataset containing over 2+ crore records sourced from Kaggle.
- Utilized ChatGPT to generate and optimize complex Python Pandas scripts for high-performance handling of mass tabular data.
- Built a scalable Power BI dashboard focused on tracking item performance variations and segmenting consumer purchasing behavior patterns.

[Investment Analysis](#) (Python • SQL • Power BI)

- Conducted comprehensive tracking on quantitative financial and market asset matrices utilizing combined Python libraries and SQL databases.
- Leveraged ChatGPT assistance to build cross-functional relational database parameters to filter data streams before layout design.
- Designed cross-filtering Power BI visual grids displaying localized tracking summaries for dynamic portfolio investment risk monitoring.

Sales Analysis (Python - Pandas • NumPy • Matplotlib • Seaborn)

- Cleaned and transformed sales data using Python.
- Performed exploratory data analysis (EDA) to identify sales trends and business insights.
- Created visualizations to present key business insights.

AI Risk Analysis (Excel • Power BI)

- Executed systemic Exploratory Data Analysis (EDA) loops to expose core revenue fluctuations and historical distribution timelines.
- Integrated multi-level data purification cycles to fix missing feature categories, strip out duplicate entries, and standardize formatting strings.
- Constructed customizable graphical metrics using Matplotlib and Seaborn to convert complex business variables into intuitive reporting visuals.

Data cleaning (Python - Pandas • NumPy • Matplotlib • Seaborn)

- Cleaned raw datasets by handling missing values, duplicate records, and inconsistent data.
- Performed data transformation, feature creation, and date-time preprocessing using Pandas.
- Prepared structured datasets for exploratory analysis and visualization.

Personal Portfolio Website (HTML • CSS • JavaScript • GitHub)

- Formulated and designed an end-to-end responsive web portfolio from scratch to catalog analytics projects and technical capability benchmarks.
- Authored and deployed functional HTML structure and custom CSS frameworks engineered via ChatGPT prompts to maintain visual responsiveness.
- Published production-ready source code onto GitHub, enforcing clean codebase architecture and seamless version control tracking.
